

60 dérniure la mohice cinematica

Scallo come pold i punto A e essevote che pli ossi dei due camelli posti in B e (
componenti come:

$$\begin{cases} \tilde{n} = \frac{\sqrt{2}}{2} \\ -\frac{\sqrt{2}}{2} \end{cases}$$

$$\begin{cases} \tilde{m} = \frac{\sqrt{2}}{2} \\ -\frac{\sqrt{2}}{2} \end{cases}$$

Computando il numero des grade de liberta osservionne de sous numericomente pou elle moltoplicité dei vincoli

M = M = 3.

il sistemal et line naticamente DEGENERE paiché gli cost del convelle comvergeure tult.

Impalande il pustablema einamatice:

dove :

AER, 9ER ed SER3

dove in questé eosé

per via dell'ossenze di cedimenti mella struttura.

Adesse 2 moliamé à costrurer les matrice einematres, pertenté anoliame à seriere:
